

Axora platform owner manual

Tenant onboarding, catalog, delivery, finance and security

For authorized Axora Platform Owners

Axora owns platform governance, tenant onboarding, the global catalog, delivery operations, finance controls, audit and recovery.

WORKFLOW ILLUSTRATION

OWNER ACCESS

Operate through authorized owner accounts

Authorized owners use separate Platform Owner accounts; a person's name never defines authorization.

1
Accept a one-time invitation

2
Use role assignments

3
Review sessions

4
Protect elevated work

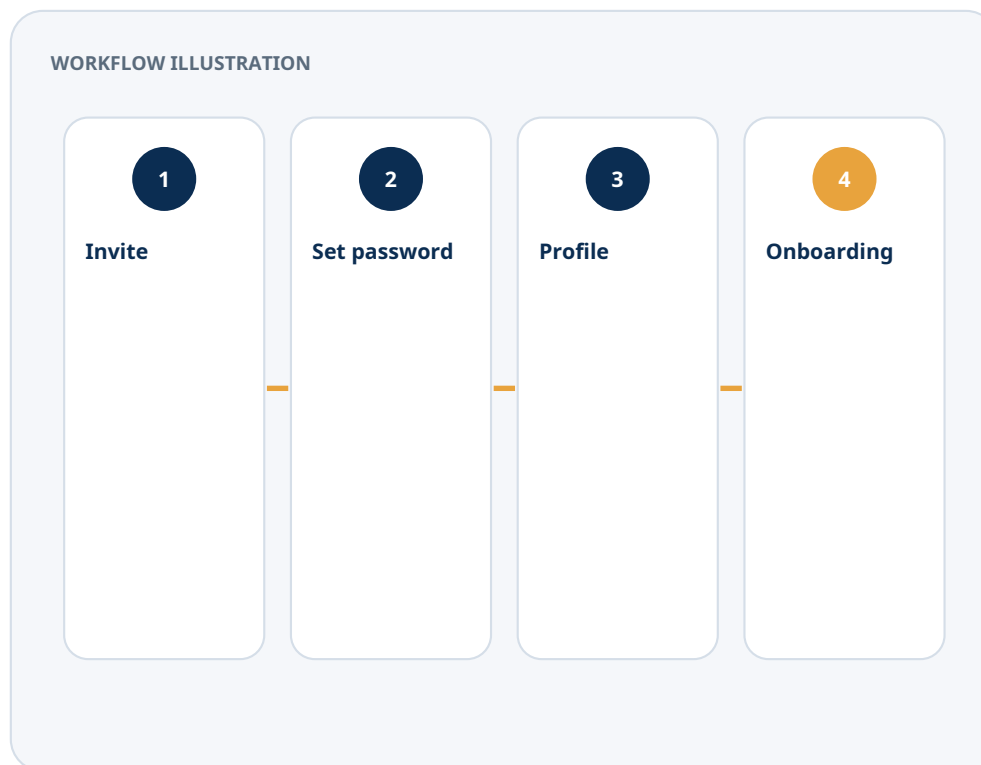

Each owner creates their own password and completes profile onboarding.

Platform Owner and Operations Administrator are generic, audited roles.

Keep only recognized devices active and use the account security page.

Use the smallest role possible; Human Resources Management, Agents and Delivery Guys have separate duties.

WORKFLOW ILLUSTRATION

OWNER RULE

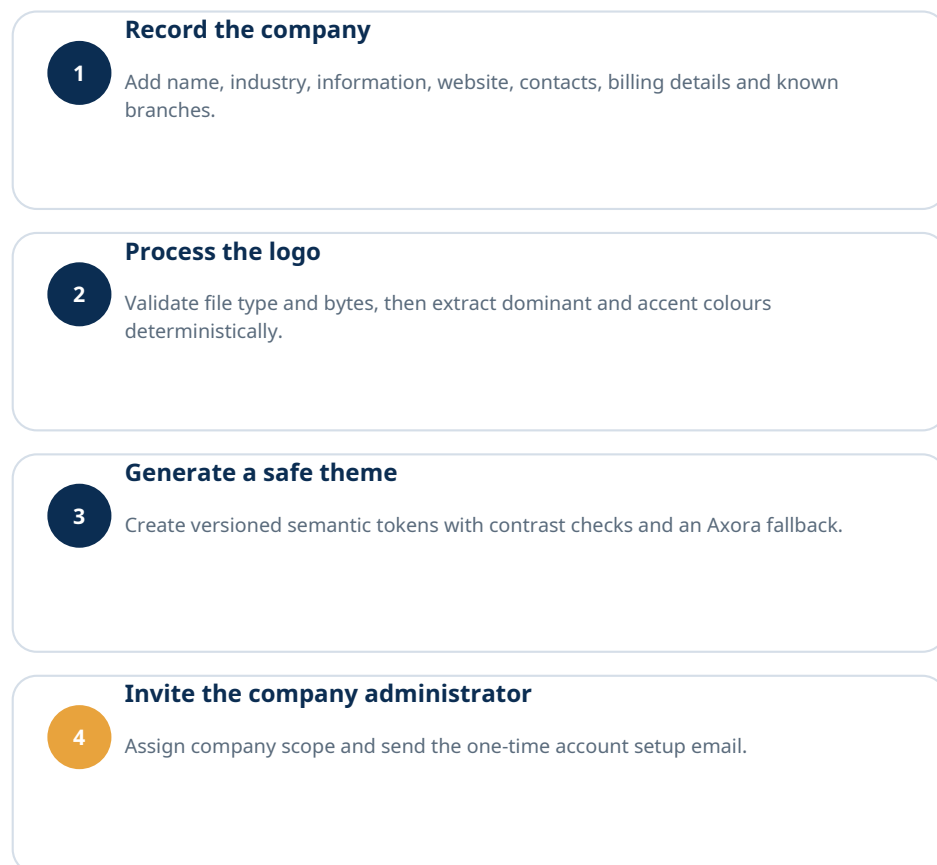

Never share an owner account, invitation link or password.

COMPANY ONBOARDING

Create a tenant and its accessible brand

A Platform Owner records verified company information and uploads the approved company logo.

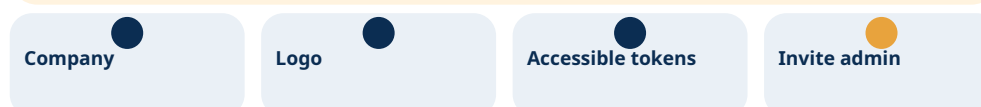

WORKFLOW ILLUSTRATION

PLATFORM CONTROL

Only an authorized Platform Owner can regenerate or emergency-correct a theme, and the action is audited.

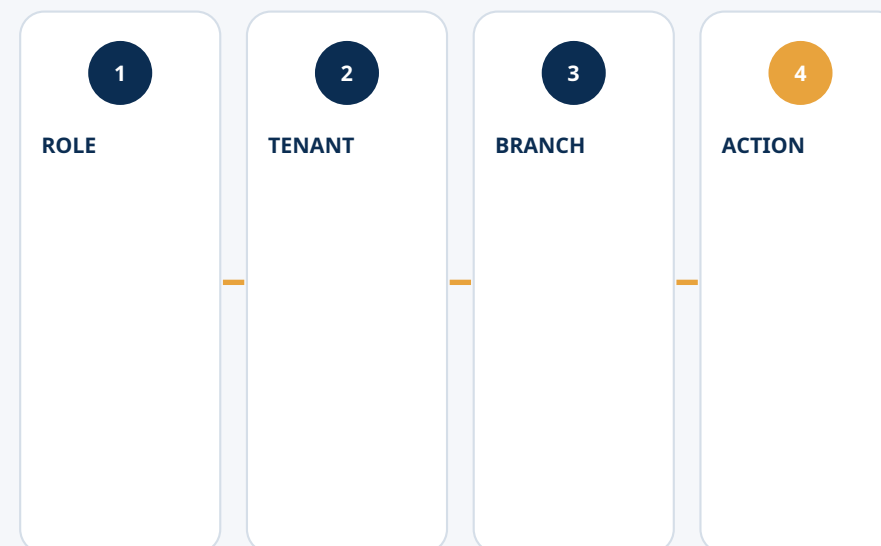

PEOPLE & INVITATIONS

Create scoped users without handling passwords

Every account separates identity, profile, membership, branch assignment, role, invitation and session state.

WORKFLOW ILLUSTRATION

CANONICAL ROLES

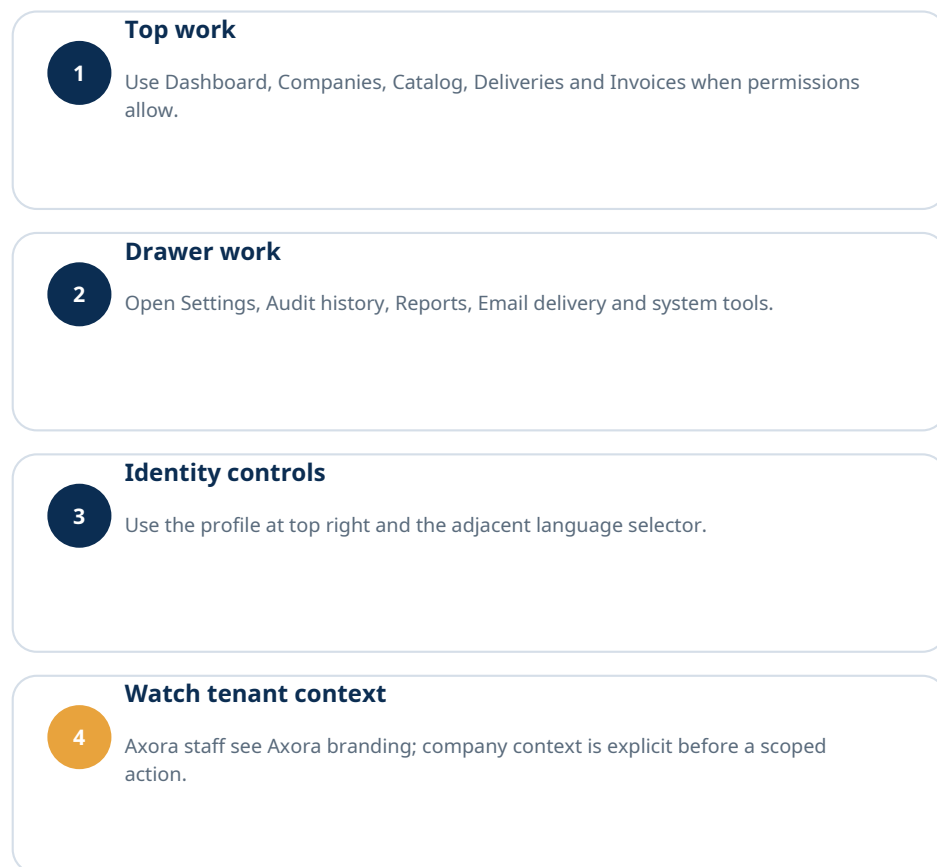

Use Platform Owner, Human Resources Management, Client Account Manager, Company Administrator, Branch or Department Administrator, Approver, Requester and Delivery Guy.

OWNER NAVIGATION

Run operations from the top shell

Frequent modules stay in top navigation; system tools and settings stay in the hamburger drawer.

WORKFLOW ILLUSTRATION

SERVER-SIDE AUTHORIZATION

A hidden link is not a security control. Every operation verifies role, scope and tenant on the server.

CATALOG

Publish recognizable products

Axora owns the global catalog and keeps private buying data away from customer roles.

Search before creating

- 1 Avoid duplicate product names, codes and variants.

Add customer details

- 2 Use a clear name, category, unit, lead time, customer price and concise description.

Upload a real image

- 3 Validate JPEG, PNG or WebP bytes, optimize locally and write useful alternative text.

Verify the Shop card

- 4 Confirm image, name, search terms, unit and customer-facing details before activation.

Publish

PRIVATE DATA

Buying cost, margin and internal notes never appear in the company Shop.

TRACKING & NOTIFICATIONS

Use one end-to-end event model

Append-only workflow events preserve history beyond the current row status.

1

Correlate the workflow
Use one workflow ID across request, approval, payment, invoice, buying, delivery and receipt.

2

Record safe metadata
Capture actor, role, tenant, branch, time, prior state, new state, reason and source.

3

Notify the next actor
Use deduplicated in-app and email messages with tenant-safe links.

4

Watch delays
Use SLA and exception alerts without exposing private event metadata.

WORKFLOW ILLUSTRATION

IMMUTABLE HISTORY

Never reconstruct critical history only from the current record state.

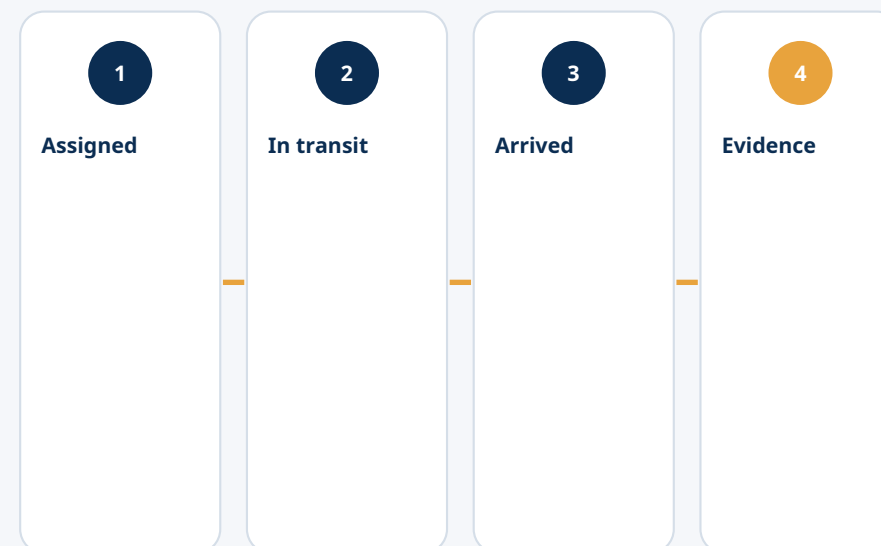

DELIVERY OPERATIONS

Assign drivers with minimum data

The mobile driver portal shows only the operational information required for assigned deliveries.

WORKFLOW ILLUSTRATION

MINIMUM DISCLOSURE

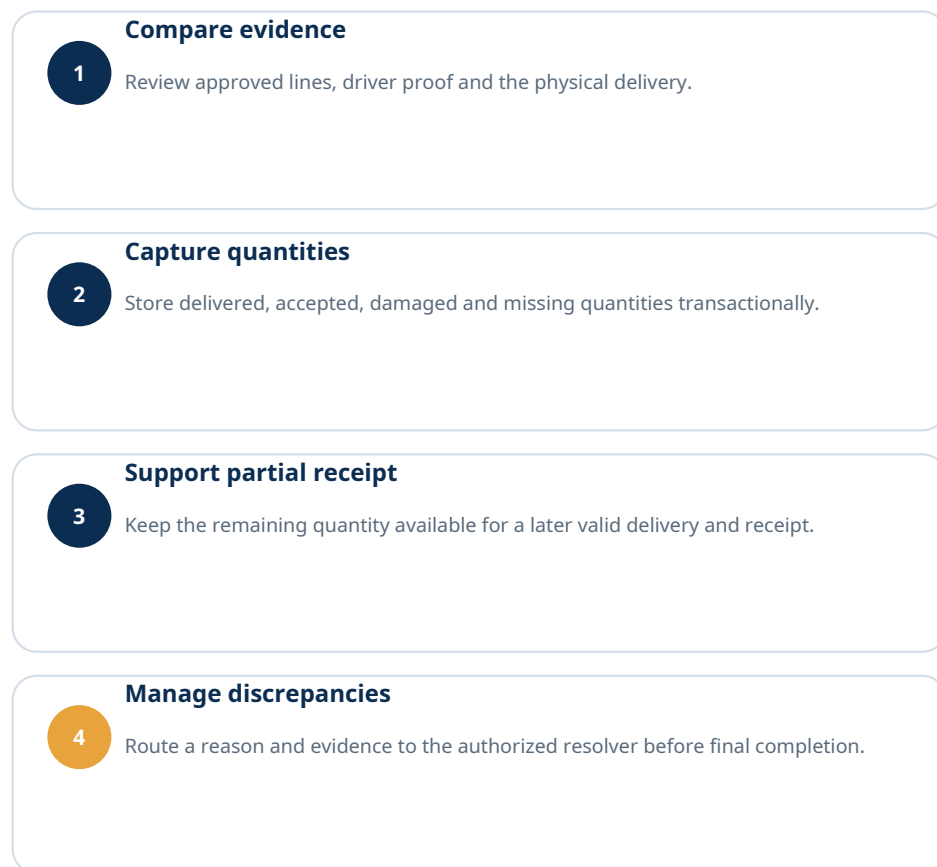

Do not expose budgets, invoices, internal costs, user lists or unrelated customers to a Delivery Guy.

RECEIVING

Keep inspection independent

Customer recipient confirmation establishes what the company accepted, not merely what the Delivery Guy reported.

WORKFLOW ILLUSTRATION

CONCURRENCY

Prevent duplicate receipt, stale reservation and repeated-event races with transactions and idempotency.

FINANCE

Oversee payment and invoice finalization

The trusted paid event finalizes the customer invoice while buying and delivery remain separate.

Verify the snapshot

- 1 Use approved products, quantities, customer prices, fees, taxes and currency.

Protect idempotency

- 2 One request produces one paid record, invoice number, final PDF and logical email.

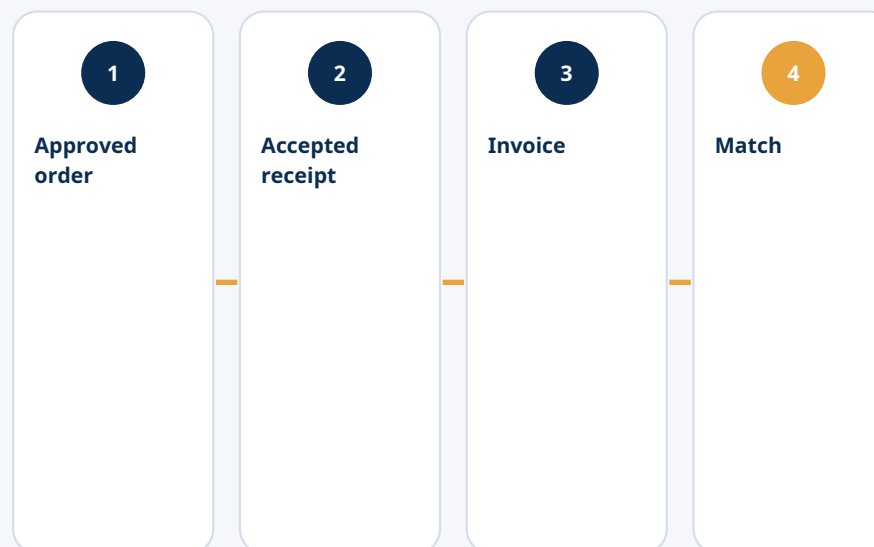

Inspect delivery independently

- 3 Receipt evidence and delivery discrepancies remain separate from the Delivery Guy's proof.

Handle email failure safely

- 4 Retry invoice delivery without changing paid or finalized states.

WORKFLOW ILLUSTRATION

PAYMENT MODEL

A future verified gateway can produce the same trusted paid event without rewriting invoice finalization.

SECURITY & AUDIT

Protect every tenant and sensitive action

Authorization, uploads, authentication, email and support operations require defense in depth.

WORKFLOW ILLUSTRATION

EMAIL SAFETY

Use the verified Axora sending domain, signed webhooks, suppression handling and a monitored Reply-To address.

LANGUAGE & SUPPORT

Operate clearly across languages

Public detection asks for confirmation; signed-in preference follows the profile across devices.

- 1 Respect explicit choice**
 Never replace a saved language preference with browser detection later.
- 2 Support RTL**
 Arabic layout, focus, labels, dates, numbers and emails remain usable and reviewed.
- 3 Use notification preferences**
 Send only useful role-aware messages and preserve required security delivery.
- 4 Support safely**
 Use workflow IDs and audited diagnostics; never request a user password.

WORKFLOW ILLUSTRATION

OWNER CHECK

Review mobile, keyboard, reduced-motion and translated critical flows before release.

OPERATIONS CHECKLIST

Verify the complete path before launch

A production-ready tenant proves its controls with low-risk records before normal purchasing.

1
Identity

Company, branches, contacts, roles, invitations and receiver assignments are correct.

2
Procurement

Shop, request, independent approval, RFQ, selection and order events are traceable.

3
Delivery and finance

Delivery evidence, independent receipt, invoice and payment status remain auditable.

4
Recovery

Audit, notifications, backup, restore and rollback procedures have current evidence.

WORKFLOW ILLUSTRATION

DO NOT GUESS

Quarantine invalid imports and resolve missing business values through review rather than inventing data.
