

Company purchasing manual

Control requests, approvals and branch budgets

For company administrators, branch administrators, approvers and requesters

THE OPERATING MODEL

Your company controls people, branches, budgets, requests and approvals.
Axora controls products, suppliers and fulfilment.

1 Set up

2 Request

3 Approve

4 Axora fulfils

Set branches and monthly budgets

A branch defines delivery scope. Its monthly budget controls approved purchasing.

- 1 Open Branches & budgets**
Confirm the active branch, delivery address and contact before people begin ordering.
- 2 Set the monthly limit**
Only the company administrator changes a branch budget.
- 3 Read the three numbers**
Monthly budget is the limit, committed is this month's approved value, and available is what remains.
- 4 Know when budget moves**
Draft and pending requests do not commit budget. Approval commits the estimated total.

ONE OWNER

The company administrator owns budgets. A branch administrator manages people for one assigned branch.

Branches & budgets shows delivery scope and monthly controls

Set the monthly limit and check committed and available amounts

Create users and assign the right role

Use named accounts. Role controls the action; branch assignment controls the location.

- 1 Requester**
Assign to employees who choose catalog products and submit and follow only their own purchase requests.
- 2 Approver**
Assign to an authorised HR lead, manager, CEO or other person allowed to commit branch budget.
- 3 Branch administrator**
Manages requesters and approvers for one branch. Use this for a local office lead.
- 4 Company administrator**
Manages all branches, budgets and company users. Keep at least one active company administrator.

SEPARATION OF DUTIES

A requester cannot approve their own request. Give every branch another authorised approver.

Named accounts show each person's role and access scope

Create an account with the smallest role and the correct branch

Find products in the Axora catalog

Employees order from a catalog maintained by Axora, not from supplier records.

- 1 Start with the image and name**
Use the product photo and name to confirm that the item matches the need.
- 2 Search the catalog**
Search by product name, code, category or brand, then open the matching product.
- 3 Check ordering details**
Review customer price, unit, minimum quantity and delivery estimate.
- 4 Add to a request**
Select Add to request. Customers cannot create products or suppliers.

PRIVATE SOURCING

Supplier contacts, quotations and Axora buying cost are not shown to company users.

The customer catalog shows product image, name and ordering details

Create a purchase request

The signed-in person becomes the requester. Choose one branch and explain the business need.

- 1 **Choose the branch**
Use the branch where the goods will be delivered. Branch-scoped users remain in their assigned branch.
- 2 **Describe the need**
Enter department, needed-by date, priority and a clear business justification.
- 3 **Choose catalog items**
Add one or more products, then enter quantity and any optional size or specification.
- 4 **Check the estimate**
The summary multiplies customer price by quantity and shows the estimated total.

BE SPECIFIC

A useful justification helps the approver decide quickly and gives Axora clear fulfilment context.

Choose the branch, need date, priority and business reason

Estimate

Review and submit

Check the request once more before it enters the company approval queue.

- 1 Verify products and quantities**
Confirm every product, unit, quantity and optional specification.
- 2 Check the branch budget**
Read the available amount. The request does not use it until approval.
- 3 Check timing and reason**
Confirm the needed-by date, priority and business justification are accurate.
- 4 Submit for company approval**
The request is created as pending. It waits for an authorised person other than the requester.

BEFORE SUBMITTING

The requester identity comes from the signed-in account. Do not use a shared login.

Check quantities, estimated total and available budget before submission

4

Pending

Approve without self-approval

The approver checks need, amount and budget before the purchase can reach Axora.

- 1 Open Purchase request approvals**
Review the requester, branch, products, quantities, total, need date and priority.
- 2 Check the budget impact**
Compare available now with the projected balance after approval.
- 3 Record the decision**
Approve within budget, or reject with a reason. Over-budget approval is blocked.
- 4 Keep the roles separate**
A person cannot approve their own request. One final company decision is recorded.

WHAT APPROVAL MEANS

Approval commits the estimated total to this month's branch budget and releases the request to Axora.

Approvers see requester, items, total and branch budget

Approve within budget or reject with a recorded reason

Track fulfilment, invoices and documents

Axora verifies, sources and fulfils the approved request while the company follows progress.

- 1 **Track the request**
Requesters follow only their own requests. Approvers and administrators can follow the wider branch or company scope.
- 2 **Check delivery and billing**
Company roles with access can review delivery progress, customer invoices and recorded COD receipts.
- 3 **Use customer-visible documents**
Download files Axora shared with the linked company or upload allowed supporting evidence.
- 4 **Know what stays private**
Supplier quotations, supplier invoices and Axora-only documents are never exposed to customer roles.

CASH ON DELIVERY

Axora records payment evidence for reconciliation. The app does not process an online payment.

Follow the request timeline after company approval

Company users see only files shared with their company and access scope

Completion

Company checklist

Complete these controls before normal purchasing begins.

- 1 Structure**
Every active branch has the correct delivery contact and, where required, a monthly budget.
- 2 People**
Every branch has named requesters and at least one different approver. No shared accounts.
- 3 Practice**
Submit one low-risk request and confirm approval, budget commitment and branch visibility.
- 4 Support**
When reporting a problem, include the request code, page, time, steps and a screenshot. Never send a password.

RESPONSIBILITY BOUNDARY

Your company controls branches, people, budgets, requests and approvals. Axora controls catalog, suppliers and fulfilment.
