

Platform owner operations manual

Run the catalog, supplier network and fulfilment safely

For Ashraf and Omar - Axora platform owners

THE OPERATING MODEL

Axora owners manage customer onboarding, the global catalog, private suppliers, sourcing, delivery and operational finance. Customer companies own their people, budgets and approvals.

1 Onboard

2 Publish

3 Wait for approval

4 Fulfil

Onboard a customer company

Axora approves the company record and first structure; the customer owns its ongoing budget decisions.

- 1 Register the company**
Enter the approved legal or trading name, main contact, billing details and payment terms.
- 2 Create the first branch**
Record the delivery address, contact and instructions before a request can use that location.
- 3 Create a named company administrator**
Assign the ADMIN role to the company, with company-wide scope.
- 4 Hand over responsibility**
The company administrator maintains its branches, budgets and people. Axora owners do not approve customer spend.

PROTECT ACCESS

Never share an owner account. Keep Ashraf and Omar as named, protected platform owners.

Customer company register and active status

Register the approved company and its billing contact

Maintain the private supplier register

Suppliers belong to Axora's global sourcing operation, not to customer companies.

1

Search before adding

Avoid duplicate supplier records. Deactivate an old record instead of deleting history.

2

Capture real details

Enter contact, coverage, address, category, lead time, MOQ, main products and actual terms.

3

Keep it private

Supplier contacts, terms, quotations and buying prices remain visible only to Axora owners.

4

Maintain status

Only active supplier records are available for preferred supplier and quotation selection.

ONE GLOBAL REGISTER

Maintain each supplier once for Axora. Customers select products, not suppliers.

Search

2

Add

3

Verify

4

Activate

Create a global catalog product

Axora owners create products once; active products are then available to approved customer companies.

1

Search the product register

Check name, code and category first to prevent a duplicate.

2

Enter customer-facing details

Add a clear name, category, subcategory, brand, size, unit, packaging and description.

3

Enter ordering controls

Set customer price, Axora buying cost, minimum quantity and delivery SLA.

4

Link sourcing data

Choose a preferred supplier when known. Buying cost and supplier identity remain private.

PUBLISHING RULE

Customers see the image, searchable details and customer price. They do not see the supplier or Axora buying cost.

Publish

Upload a clear product image

The image and product name are the customer's quickest way to recognise the correct item.

- 1 Choose a clean image**
Use a clear JPEG, PNG or WebP that shows the correct product without unrelated content.
- 2 Stay within the limit**
The source file can be up to 5 MB. Axora automatically prepares it for the catalog.
- 3 Write alternative text**
Describe the visible product briefly, for example: White A4 copy paper ream, 80gsm.
- 4 Upload or replace**
Add the image when creating a product, or replace it from the product register later.

IMAGE QUALITY

Match image, name, unit and specification. A misleading image can cause the requester to choose the wrong item.

Verify the customer catalog

Review every new or changed product from the customer's point of view.

- 1 **Confirm the card**
The product card should show the correct image, name, customer price, unit, MOQ and SLA.
- 2 **Test search**
Search using the name, code, category and brand that a requester is likely to use.
- 3 **Check the privacy boundary**
The customer view must not show suppliers, quotations, buying cost or internal notes.
- 4 **Maintain the record**
Replace an unclear image and deactivate outdated or duplicate products instead of deleting history.

FINAL CHECK

A product is useful only when a requester can recognise it, find it and understand how it is ordered.

4 Maintain

Start sourcing only after approval

The customer decides whether to spend; Axora decides how to source and fulfil.

- 1 **Wait for the company decision**
Do not source a New Request that is still pending. Owners cannot approve customer budgets.
- 2 **Begin verification**
An approved request moves to Under Verification, then can move to Waiting for Quotation.
- 3 **Capture comparable offers**
For each request line, record the real reference, unit price, fee, validity, MOQ and lead time.
- 4 **Select with a reason**
Compare like with like. Selecting an offer records the buying price and moves the work into supplier assignment.

Only company-approved demand moves into Axora verification

Compare quotations and record why the selected offer won

SEPARATION OF DUTIES

The company approver authorises budget. The Axora owner records sourcing and fulfilment evidence.

Deliver, invoice and control documents

Keep the operational record complete while exposing only customer-appropriate evidence.

1

Record delivery progress

Update the approved request lines as they are prepared, dispatched, partially delivered or delivered.

2

Record invoices and COD evidence

Customer and supplier invoices remain separate. Wait for full delivery; COD entries record a numbered receipt, not an online payment.

3

Choose document visibility

Use Axora only for supplier or internal evidence; explicitly share suitable files with the linked customer.

4

Close with evidence

Complete the workflow only after delivery, customer invoicing and settlement are recorded.

HARD PRIVACY RULE

Supplier invoices are always Axora-only. Customer roles can see only customer-shared files in their access scope.

Record delivery progress against the approved request lines

Issue invoices and record COD evidence for reconciliation

Choose Axora-only or customer-shared visibility for each file

4

Complete

Owner checklist

Use this list before onboarding companies or fulfilling live requests.

- 1 **Master data**
Company, branch, named company administrator, supplier and product records are active and accurate.
- 2 **Catalog quality**
Every active product has recognisable details; important products have a clear image and alternative text.
- 3 **Workflow control**
Customer approval exists before sourcing; quotation and document decisions include evidence and reasons.
- 4 **Accountability**
Review audit history and exceptions. Never send passwords or use shared owner accounts.

RESPONSIBILITY BOUNDARY

Axora owns catalog, suppliers, sourcing, delivery and finance records. Customer companies own their people, budgets and approvals.

Audit history records important changes, actors and reasons

Owner dashboard: approved demand, operations and financial controls
